

SOPHOS

Simply Secure

SOPHOS

Sophos provides security that frees you to focus on your business.

Trusted by more than 100 million users and endorsed by industry analysts as a leader, Sophos provides a full range of endpoint, encryption, email, web, and NAC solutions that are simple to deploy, manage and use. With Sophos, you'll have the best protection against today's complex, blended threats.

» As threats evolve, control is critical

The perimeter dissolves

The nature of information security has changed forever. The old approach to security – identifying code known to be bad and preventing it from breaching the organization's network perimeter – no longer works.

Networks that were once locked down within the walls of a company must now accommodate mobile employees, flexible work arrangements, and access for contractors and partners. Even as threats to security escalate.

IT departments are fighting for control. A security strategy cobbled together from point solutions is not just hard to manage, it's impractical. And it doesn't account for the blended threats a company faces.

In addition to firewalls, anti-virus, and anti-spam, organizations need security across a number of fronts that cover the entire infrastructure.

A comprehensive security strategy requires more than just blocking of malware. Encryption, email, web, and network access control solutions are strategic necessities.

Support desk costs have escalated. And IT is being pulled in more directions than ever.

So the last thing you want is another point solution that's hard to roll out, impossible to manage and tough to use.

That's where Sophos comes in. Our powerful solutions deploy easily, require minimal management, and are simple to use.

You'll be able to focus on the needs of your business knowing that Sophos is securing your entire organization.

"We've been delighted by the high level of dedicated support and expertise delivered by Sophos, particularly given our need for a fast implementation."

Chris Leonard
European IT Security and Compliance Manager
Heinz

» Unified endpoint,
encryption, web, and
email technologies

“Sophos’s Enterprise Console provides ease-of-use and uncomplicated deployment with full Active Directory integration. In the end, Sophos consistently outperformed others in many key areas and provided better security with its expedited updates, better zero-day protection, and application control functionality.”

Peter Clark
Director of Information Systems
Jordan’s Furniture

Security that frees you to focus on your business

Sophos Security and Data Protection gives you a brilliantly simple way to manage the cost and complexity of keeping your organization secure.

We combine our industry-leading endpoint security, data protection, compliance technologies and expertise in a single, simple-to-use solution.

Defeating today's and tomorrow's threats

Unique technologies developed by experts in SophosLabs™ protect you from unknown threats at every vulnerable point – desktops, laptops, servers, mobile devices, email and web – before they execute and even before we've seen them. Our pioneering host intrusion prevention system (HIPS) technology uses four layers of integrated detection to stop zero-day threats – without complex configuration.

Consistent, transparent, centralized policy-based encryption

Sophos combines encryption with data leakage prevention. Centrally managed from a single console, you gain the most flexible central policy and key management functionality available.

Unifying control of the good, the bad, and the suspicious

We give you the control you need while maximising user productivity. Web browsing is safe, spam is eliminated, phishing attacks stop.

True integration delivers faster, better protection

We take a completely integrated approach to security and data protection.

At the threat analysis level, SophosLabs combines malware, spam, application and web expertise.

At the administrative level, you can manage all threats with single, integrated policies, and at the detection level, our unified engine looks for the good and the bad at every vulnerable point, in a single scan.

Our multi-layered endpoint data security enforces consistent, transparent, centralized policy-based encryption and data security for PCs and mobile data in mixed environments.

Driving down costs through simplification and automation

With easy integration and simplification for any size network, you can achieve more with existing budgets. Simple dashboards, remote monitoring, and automated day-to-day management free you to focus on your business rather than maintaining the system.

» More than 100 million users in 150 countries rely on Sophos

“With the Sophos Enterprise Console, updating machines is a breeze. We now have centralized reporting and can create policy changes without having to touch every computer on the network. Sophos has allowed us to turn a repetitive task into one that is streamlined and painless.”

Bill Heese
IT Manager of Global Creative Services
Conair

SophosLabs

Expertise and technology for real security

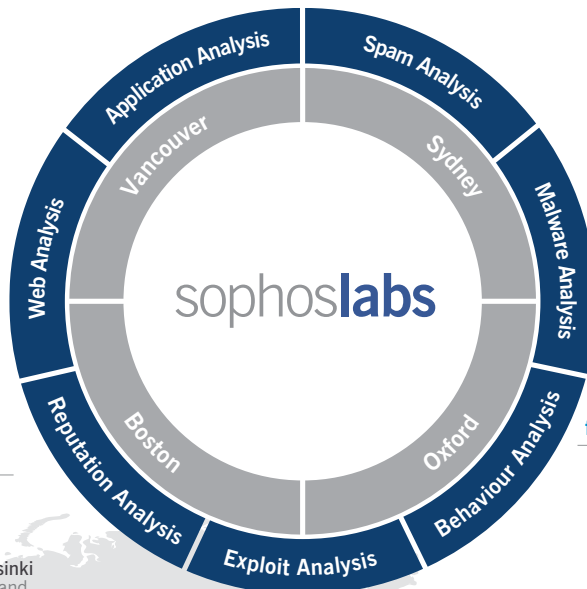

SophosLabs is at the core of our expertise. You gain the fastest response in the industry to emerging threats, and take advantage of powerful, robust security.

Our global network of highly skilled and thoroughly trained analysts has more than 20 years of experience protecting businesses from known and emerging threats. Our expertise covers every area of network security – including viruses, spyware, adware, intrusion, spam, and malicious URLs.

Strategically located in Asia-Pacific, Europe and North America, SophosLabs – staffed by highly trained, highly experienced experts – rapidly creates and delivers updates before many organizations have even started their working day.

Innovative technologies such as Behavioral Genotype® Protection and rapid signature updates combine to stop new and unknown malware. As a result, we regularly beat competitors in independent tests.

- » Integrated threat expertise, deployment and detection
- » Millions of emails and web pages analyzed every day
- » Thousands of malicious URLs blocked every day
- » Innovative HIPS, app and device control, anti-spam, and sender genotype technology
- » Innovative proactive technologies for pre-execution detection
- » Constant independent recognition including 44 VB100 awards
- » Automated analysis
- » Genotype database with terabytes of data

Global visibility and cross-threat expertise ensure the broadest, fastest protection

» Local language web, email and telephone support included

Sophos Support Services

All Sophos products come standard with 24/7 support and a range of additional services is also available.

Premium and Platinum Support Enhancements to Sophos Standard 24/7 support.

Sophos Professional Services Expert teams provide you with the right skills to implement and maintain complete endpoint and gateway security, maximizing your return on investment.

Sophos ZombieAlert™, Sophos PhishAlert™ and Sophos WebAlert Services Warning services if your organization's computers have been hijacked, if your company name is being abused by a phishing campaign, or if any of your webpages are infected by malware.

“Sophos has risen to the challenge impressively. The high level of support the company offers also gives us peace of mind that no matter what security situation may arise, we’ll be able to handle it and easily fend off any attacks.”

Steve Orman
Head of IT
Sussex Health Informatics Service

Sophos Security and Data Protection

Improving security through control for endpoint, encryption, web and email

Sophos Security and Data Protection provides complete protection across endpoint, email and web in a single solution. It enables you to proactively protect against all new and unknown threats and secure your data against accidental or malicious loss. 24x7x365 support is standard.

Endpoint Security and Data Protection

Simplified cross-platform security, centralized management, full data encryption and flexible control of devices, applications and network access ensuring your data is secured against infection and loss and complies with government/industry regulations.

Sophos SafeGuard

A comprehensive encryption solution that covers data confidentiality, integrity and central security policy management.

Small business solutions

Tailoring the power of Sophos Security and Data Protection for organizations with limited IT resources, and delivering easy-to use, reliable protection against malware and spam on Windows and Mac networks.

Third-party integration

OEMs and users of third-party applications can harness the power of Sophos technology by integrating with our powerful anti-malware and anti-spam engines.

Email Security and Data Protection

Managed email security appliances and protection for Exchange, UNIX and Notes servers. Unique integration of anti-virus, anti-spam, anti-phishing and policy enforcement secure and control email.

Web Security and Control

The first managed appliance to proactively ensure safe web browsing, blocking suspicious URLs, hijacked or infected websites, and download of spyware, viruses, malware and unwanted content.

Sophos NAC Advanced

Enables company-wide compliance with your internal policies, and helps you to meet industry and government regulations. Controls network access, protects data, and ensures that all computers have up-to-date security software and patches.

Support included in the subscription

No need to hire a specialized staff. We've got the experts and you'll have access to them as part of your subscription.

Simple pricing and licensing

One simple, subscription-based license provides web, email and telephone support and all future updates to protection, management and product upgrades.

Free home use

Employees of our customers can take advantage of our free home use licenses for their personal computers.

Multiple threat protection

- » Anti-virus
- » Anti-spyware
- » Anti-adware and potentially unwanted applications
- » Application control – VoIP, IM, P2P and more
- » Behavior analysis (HIPS)
- » Client firewall
- » Anti-spam
- » Anti-phishing
- » Email content control
- » Malicious website blocking
- » Productivity filtering
- » Real-time web download scanning
- » Control of guest access
- » Blocking unknown or unauthorized users

“The Sophos EPP suite offers a good balance of malware, personal firewall, HIPS defenses and integrated data protection capabilities that are deterministic and easy to deploy and manage.”

Peter Firstbrook, Arabella Hallawell, John Girard, Neil MacDonald
Gartner Magic Quadrant for Endpoint Protection Platforms, 2009

Trust matters

Our unique approach is why analysts view us as a leader, and why over 100 million users, including the world’s leading business and security organizations, trust Sophos.

“Enterprises need to evaluate how effective their current endpoint security solution is at handling the expanding requirements of data protection.”

Charles Kolodgy, Research Director, Security Products, IDC

“The client security market is made up of hundreds of small, emerging security vendors with exceptional technology...all of these best-of-breed vendors are prime targets for acquisition by the incumbent vendors looking to beef up their suites. Proof of this trend: Sophos recently announced its acquisition of Utimaco Safeware to add encryption capabilities to its suite.”

Natalie Lambert, *Market Overview: Client Security*, Forrester Research, September 2008

“Buyers who prefer a broad and comprehensive EPP suite with impressive management capability, especially NAC...will do well to consider Sophos.”
