

WHAT'S NEW | Web Protection

Enhanced authentication and policy options

Easily manage iPads, mobile devices, shared workstations, guest access and more

- ▶ Control access by device or network segment
- ▶ Enable user logins from iPads or other devices
- ▶ Easily manage guest access
- ▶ Utilize single sign-on for Macs
- ▶ Allow web applications to work seamlessly
- ▶ Create location-aware policies
- ▶ Suppress activity logging to protect privacy

Enhanced Authentication

We've made it incredibly easy to manage diverse authentication needs. You can now control access based on device type, network segment or even a specific web application.

Here are just a few ways you can benefit:

Manage mobile device access Authenticate users easily with the new captive portal.

Enable easy and compliant guest access Provide guest access without credentials and know they're compliant.

Manage shared iPads or workstations Use single sign-on—now on Macs too—or utilize the captive portal with a time-out period that you control.

Keep web applications working Allow your important web applications to bypass authentication for updates and background activity.

Always have a fall-back plan You can now provide users with default policy access even if authentication fails.

The screenshot shows the 'Devices' configuration page in the Sophos web protection interface. It has three tabs: 'IP Addresses', 'Devices', and 'Applications'. Under the 'Devices' tab, there are two radio buttons: 'Include all devices in this profile' (unselected) and 'Include only the following devices in this profile' (selected). Below this is a list of device types with checkboxes: 'Android devices' (checked), 'iOS devices' (checked), 'Kindle devices' (checked), 'Linux/UNIX computers' (unchecked), 'MacOS computers' (unchecked), 'Windows computers' (unchecked), and 'Unknown' (unchecked).

Create authentication profiles based on device, network segment, or application.

The captive portal is great for iPads, mobile devices, classrooms, shared workstations or guest users. And it's fully brandable.

New Policy Options

Added flexibility to manage policy for roaming endpoints, unauthenticated users and more.

Location aware policy for endpoints If you're managing web policy for Sophos endpoints, you can now define location aware policies.

Suppress activity logging You can now disable activity logging for select users to protect their privacy.

Unauthenticated user policy You can now offer access to unauthenticated users, according to your default policy.

New policy options provide for location awareness and privacy protection.

Mix and match authentication options to satisfy even the most diverse needs.
