

SOPHOS

simple + secure

Sophos Client Firewall

Included in [Endpoint 10](#)

Our location-aware, centrally managed Sophos Client Firewall is designed specifically for endpoint computers in an enterprise environment. Proactively lock down your computers to protect against known and unknown threats, such as internet worms and hackers.

Key benefits

- › Defends computers from complex and rapidly spreading threats. Prevents virus outbreaks before they can disrupt your business
- › Installs rapidly with a preset configuration and deployment from a central console
- › Reduces administration with scalable, centralized deployment and management
- › Enforces location awareness rules to provide appropriate levels of protection for different network connections
- › Stealth mode denies unauthorized network access by hackers
- › Prevents application hijacking by monitoring inappropriate application and system calls
- › Stops Trojans and spyware from stealing confidential data by filtering and controlling application communication
- › Prevents application impersonation by using checksumming
- › Updates automatically with new versions and settings
- › Includes 24/7 [certified expert support](#). Contact us anytime for one-to-one assistance

Advanced proactive protection

Prevent threats, known and unknown Sophos Client Firewall stops known and unknown threats by tracking active ports and closing all inactive ports. Know that internet worms are blocked before they can exploit operating system vulnerabilities.

Designate secure channels A list of trusted ports and protocols can be created, providing a robust and flexible security solution.

Prevent hijacking Make sure only trusted applications access your network resources and prevent application hijacking by monitoring application and systems calls.

Stop application identity theft Prevent malware from impersonating applications using checksumming to identify authorized applications. Don't allow malware to use application privileges to spread and execute its payload.

Remove from attackers view Effectively make your computers invisible to attackers. Preventing hackers from identifying and targeting protected computers. This provides a level of protection over and above Network Address Translation (NAT).

Track TCP and UDP Stateful inspection keeps track of active Transmission Control Protocol (TCP) and User Datagram Protocol (UDP) sessions, allowing only authorized network traffic.

Guarded, even on the go Location-aware security policies make sure mobile computers are protected, whether in or out of the office.

Licenses

Sophos Client Firewall is included in all of our Endpoint Protection licenses. It is also available in our Sophos Security Suite and Sophos Computer Security small business products.

System requirements

Platforms supported

- Windows 7*
- Windows Vista*
- Windows XP Pro*
- Windows XP Home
- Windows 2000 Pro
- * 32- and 64-bit versions

Disc space

- Minimum 100 MB

Recommended memory

- 512 MB RAM

Processor

- Pentium class 300 MHz
