

Sophos Protection for Mac OS X

Included in our Endpoint Protection

Sophos Anti-Virus for Mac OS X provides you with the best threat protection in the industry for all your Macs. Its high-performance scanning protects your system as you go, keeping you safe from all kinds of threats without slowing you down. It's backed by SophosLabs, so it's always up-to-date with the best real-time threat intelligence. And it has a look and feel that only a Mac user can appreciate.

Key benefits

- ▶ Protects all your Macs against the latest threats thanks to Live Protection
- ▶ Detects, quarantines and disinfects the latest Mac threats, and also keeps your Macs from distributing Windows viruses
- ▶ Centrally manage Mac protection alongside Windows, Linux, UNIX and virtualized computers
- ▶ Disinfect computers remotely in a single, simple operation
- ▶ Scan for malware, on-access, on-demand or on a schedule
- ▶ Detects viruses in compressed attachments, including recursive archives
- ▶ Reduces scanning overhead by intelligently recognizing uninfected file types
- ▶ Enables scanning exclusions for files, folders and wildcards
- ▶ Provides automatic, centralized reporting of every virus incident
- ▶ Updates efficiently across a network or direct from Sophos for offsite computers
- ▶ Updates without impacting end-user productivity
- ▶ Updates automatically with the latest protection from SophosLabs—a global network of threat analysis centers
- ▶ Includes **24/7 certified expert support**. Contact us anytime for one-to-one assistance

Complete threat protection

Prevents infection Sophos Anti-Virus detects, reports and disinfects viruses, spyware, Trojans and worms at every potential point of infection. Get full network protection on all your Mac computers.

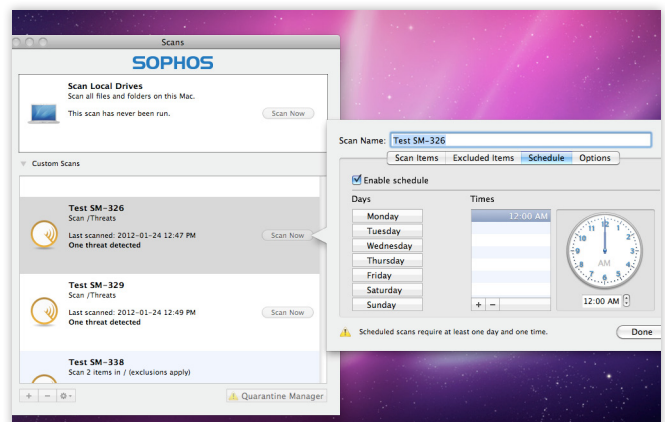

Seeks out malicious code A range of technologies including Dynamic Code Analysis, pattern matching, emulation and heuristics automatically check for malicious code.

Cross-platform virus detection We are 100% Checkmark-certified for spyware detection. Deletes and cleans Windows viruses on a Mac OS X computer using integrated cross-platform virus detection.

Live Protection Get a direct connection to the very latest information we have about new Mac threats. Using our global intelligence network, we can perform real-time lookups to optimize your Mac protection.

Flexible scanning Get on-access, on-demand or on-a-schedule scanning, allowing you to customize your scanning to fit the way you work.

Setup custom scanning options to suit your needs.

Scalable, centralized control

Centralized control Using Sophos Enterprise Console on a Windows computer, you can centrally configure and manage all your Windows, Linux, UNIX, virtualized and Mac computers from a single point.

Single-console updating For Mac-only networks, Sophos Update Manager allows updating and configuration from a single Mac computer. You can schedule updating and determine how scanning will take place on desktops and laptops.

One installation As a universal binary, Sophos Update Manager is a single install for both Intel- and PowerPC-based computers.

Automated alerts Receive comprehensive messages from Sophos Enterprise Console when updates are deployed. Get all the information you need to effectively monitor and control the software. Alerts are sent to administrators and users if any viruses are found.

SMTP messages Alerts are sent using the SMTP client in Mac OS X. By using the SMTP client, virus alerts for remote computers are queued until they reconnect to the network, preventing the loss of any alerts.

High-performance scanning and rapid updates

Eliminates redundancy Perform scanning on-access, on-demand or on a schedule. Decision Caching technology only re-scans those files that have changed. This way, scanning performance increases without compromising protection.

Interface options Sophos Protection for Mac OS X provides immediate scanning of volumes, directories and individual files via a graphical or command-line interface.

Updated protection Automatically download the latest software and virus detection updates. Get updates from SophosLabs or from the corporate website using Sophos AutoUpdate.

Live Protection Closes the gap between updates by making the latest SophosLabs threat intelligence available through the cloud.

Industry-leading expertise 24/7

Always supported All of our customers receive superior 24/7 technical support from our in-house global support experts, as standard with every license.

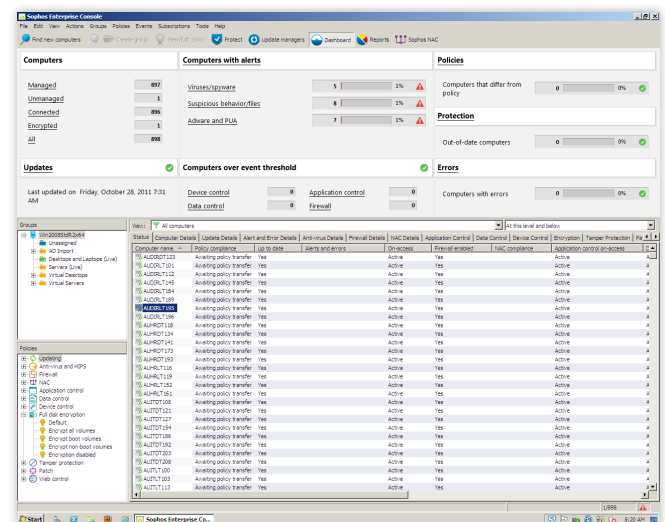

Licensing

Sophos Protection for Mac is included in all of our Endpoint Protection licenses. [Compare.](#)

Languages available

English, French, German, Italian, Japanese and Spanish.

Protect Mac, Windows Linux, UNIX and virtualized platforms—all from one console.

System requirements

Operating systems supported

- Mac OS X 10.4.x/10.5.x/10.6.x/10.7.x

Management server

Sophos Enterprise Console*

- Windows Server 2008
- Windows Server 2003
- Windows 2000 Server SP4+

Hardware

- All Intel- and PowerPC-based Macs including Xserve
- Multicore processor support

Disc space

- Minimum: 150 MB

Recommended memory

- 256 MB
