

Sophos Protection for Non-Windows

Included in our Endpoint Protection

Part of Sophos Endpoint Protection, Sophos Protection for non-Windows provides you with multi-platform protection against viruses, spyware and other malware. Automatic updates provide complete protection while integrated detection isolates and cleans Windows-based threats from any operating system. And, since it's included in our Endpoint Protection it's centrally managed along with your Windows, Mac, Linux and UNIX computers.

Key benefits

- ▶ Detects and disinfects viruses, spyware and other malware
- ▶ Protects non-Windows computers against all known threats
- ▶ Genotype technology protects against unknown threats and virus families
- ▶ Cleans Windows viruses in non-Windows environments
- ▶ Provides automatic centralized reporting of every virus incident
- ▶ Receives small updates that have a minimal impact on system resources
- ▶ Updates automatically with the latest protection from SophosLabs, a global network of threat analysis centers
- ▶ Includes 24/7 certified expert support. Contact us anytime for one-to-one assistance

Multiplatform protection in one product

Platform support Platforms covered include most common versions of Mac OS X, Linux, UNIX, OpenVMS, Network Storage and NetWare.

Centralized management Sophos Enterprise Console can centrally configure and manage all your computers from a single point.

Intrusion prevention Take advantage of Behavioral Genotype Protection. Automatically guard against unknown threats by analyzing behavior before code executes.

Threat detection The Sophos virus detection engine detects, reports, and disinfects viruses, spyware and other malware. We're 100% Checkmark-certified for spyware detection.

Updated protection Automatically downloads the latest software and virus detection updates from SophosLabs. Know that all the computers—including laptops—across your network are fully protected.

Customizable policies ActivePolicies help create security policy for computers and servers and apply it across multiple groups simultaneously.

Low performance impact Perform scanning and disinfection tasks on-demand or automatically at scheduled times.

Protect Windows, Mac, Linux, UNIX and virtual platforms—all from one console.

The screenshot displays the Sophos Enterprise Console interface. At the top, there are navigation tabs for Computers, Policies, Events, Subscriptions, and Tools. Below this, a summary dashboard shows 'Computers with alerts' for Viruses/spyware (5 alerts, 1%), Suspicious behavior/files (4 alerts, 1%), and Adware and PUA (7 alerts, 1%). It also shows 'Computers over event threshold' and 'Errors' sections. A table below lists various policies such as 'Anti-virus and HPS', 'Device control', and 'Web control', with columns for status, update date, and compliance.

Mac OS X

Cross-platform virus detection Integrated cross-platform virus detection means Mac and Windows viruses can be deleted or cleaned on a Mac OS X computer.

Single-console control Allows scheduled updating and configuration from a single Mac computer. Or, manage all your computers from our Sophos Enterprise Console.

Prevents infection Install Sophos Protection and Sophos Update Manager on both Intel-based and PowerPC-based computers.

Linux

Customizable scanning We deliver on-access, on-demand and scheduled scanning of local hard disks, media drives, shared file systems and distributed file systems.

Cross-platform detection Using integrated cross-platform virus detection allows for cleaning and deletion of Windows viruses on a Linux computer.

Kernel support We provide support for many Linux kernels, including recent 64-bit versions. Red Hat Package Manager allows deployment in Linux-only environments.

UNIX

Platform support You get support for over 25 platforms. Clean and delete Windows viruses from any UNIX computer.

Administration options Get the flexibility you require. Manage from the command line or through Enterprise Console—for Solaris 9 and 10 on SPARC and Intel (i386).

Updated protection Automatically receive the latest software and virus detection updates. Know that all the computers across your network are fully protected.

NetWare

Reduce system impact Perform maintenance tasks with minimal impact on your system performance. Execute scanning and disinfection on demand or automatically at scheduled times.

Direct notifications Send notifications of virus alerts to eDirectory group users.
