

Sophos Management Console

Our Sophos Enterprise Console helps you manage the complete security features included in our Endpoint Protection simply. With our single console you can setup, deploy and manage our antivirus and host intrusion prevention, web filtering, encryption, patch assessment, device and data control, application control, firewalls and NAC.

Key benefits

- Provides scalable management across tens of thousands of Windows, Linux, Mac OS X, UNIX and virtualized machines
- Our Report Manager gives you both on-demand and scheduled network-wide reporting. Use one of our standard reports or filter a report to meet your needs
- Monitors security status providing an at-a-glance view of all alerts and policy compliance across all the computers on the network
- Enables the easy discovery of all computers on the network and centrally deploys across the network from a single console
- Synchronizes with Microsoft Active Directory to automatically protect new computers as they join the network
- One console to setup, deploy and manage our antivirus and host intrusion prevention, web filtering, encryption, patch assessment, device and data control, application control, firewalls and NAC
- Quickly creates and enforces security policies across multiple groups, using Sophos ActivePolicies
- Enables centralized cleanup of malware and potentially unwanted applications
- Provides role-based administration privileges assigned with help desk and read-only consoles

One simplified, automated console saves you time

No worry installation Our installation wizard is simple to use and includes everything you need for a quick and easy install. We even include a built-in removal tool that automatically removes your current antivirus.

One console, many platforms Install and update your endpoint protection across all of your Windows, Mac OS X, Linux, UNIX and virtualized platforms—including remote computers.

Locate new machines Get flexibility in how you find new computers. Methods such as network find, IP/Subnet and Microsoft Active Directory allow you to rapidly deploy protection.

Automatic protection and enforcement Synchronization with Active Directory allows you to automatically protect new computers on your network. Enforce your chosen security policy automatically.

Delegate responsibility Create management roles and sub-estates to share the workload without handing over full administration capabilities. Three default roles grant responsibility for specific actions like cleanup or network management to trusted users.

Protect Windows, Mac, Linux, UNIX and virtualized platforms—all from one console.

The screenshot displays the Sophos Enterprise Console interface. The top navigation bar includes options like File, Edit, View, Actions, Groups, Policies, Events, Subscriptions, Tools, and Help. Below this, there are several summary cards for 'Computers', 'Computers with alerts', 'Policies', 'Updates', 'Computers over event threshold', and 'Errors'. The 'Computers' card shows counts for Managed (893), Unmanaged (1), Connected (896), Encrypted (1), and All (898). The 'Computers with alerts' card shows counts for Viruses/spyware (5), Suspicious behavior/files (8), and Adware and PUA (7). The 'Policies' card shows counts for Computers that differ from policy (0) and Out-of-date computers (0). The 'Updates' card shows counts for Device control (0), Application control (0), and Data control (0). The 'Computers over event threshold' card shows counts for Device control (0), Application control (0), and Firewall (0). The 'Errors' card shows counts for Computers with errors (0). Below these cards is a table with columns for Computer name, Policy compliance, Up to date, Alerts and errors, On-access, Firewall enabled, NAC compliance, Application control on-access, and a status icon. The table lists various computer names and their corresponding policy compliance and status.

Centralized control of more than just antivirus

Streamlined management Enterprise Console simplifies the management of antivirus, anti-spyware and anti-adware. The console also helps you manage web filtering, encryption, patch assessment, device and data control, application control, firewalls and NAC.

Monitor removable storage You can set policies controlling which removable devices and network interfaces people can use.

Control your data Perform DLP scanning and policy enforcement using our single endpoint agent.

Regulate application usage We provide application control lists you can use to easily block installation and use of unwanted applications that can lead to data loss.

Filter sites from our console Our Web Filtering in Endpoint lets you control web activity even when users are off your network reducing your gateway costs.

Know you're patched Be confident that your computers are patched. Our Patch Assessment in Endpoint prioritizes and shows computers missing critical threat-related security patches right in our console.

Fast encryption Our integrated full-disk encryption delivers faster initial encryption and 30% faster accelerated ongoing encryption. Easily deploy, manage and get encryption reporting.

Single-console prevention Get a complete host intrusion prevention system without the need for complex installation and configuration.

Detailed reporting for regulatory compliance and security audits

Data at a glance, in detail Get information on all your computers, regardless of their operating system or physical location. And, get data however you like—in aggregate and by individual computer, on a dashboard or by email.

Dashboard monitoring Take advantage of at-a-glance views of alerts across your network, without clicking anything. Our dashboard lets you see which computers have viruses, tried to run unauthorized applications or have out-of-date security. Set alert thresholds and have alerts emailed directly to you.

Smart Views Get detailed information easily. Using Smart Views, just one click lets you see which computers have alerts. Filter down by date, user and more to see only the computers that need your attention, and then copy, paste into a spreadsheet or print. And to fix an alert, just right click to remotely cleanup files, registry settings and running processes.

Report Manager Use both on-demand and scheduled network-wide reporting. Report Manager allows you to use one of our standard reports or filter a report to meet your needs. Get reports for alert history, endpoint non-compliance, events by user and more. View reports as tables or charts, or export them in a number of formats.

Customized reporting using your reporting tools Need more reporting options? No problem—use our [Sophos Reporting Interface](#) to get the data you need right within your existing reporting tools.

Industry-leading expertise 24/7

Always supported Our 24/7 in-house, [certified expert support](#) operation is always available to you. While SophosLabs—our global network of threat analysis centers—provides a rapid response to emerging and evolving threats.

Supported licenses

Sophos Enterprise Console is included in our Endpoint Protection—Advanced and Endpoint Protection—Enterprise licenses. [Compare](#).

System requirements

Platforms managed

- Windows
7/2008/Vista/2003/XP/2000
- Mac OS X
Versions 10.4/10.5/10.6/10.7
- Linux*
- UNIX*

Management server

- Windows
Server 2008/Server 2003/2000 Server
- VMware
vSphere4, ESX 3.5/Workstation 5.0
- Hyper-V
Microsoft Hyper-V 2008
- Citrix
XenServer

Remote console

- Windows
2003/2000 Pro or Server/
XP Pro
- VMware
vSphere4/ESX 3.5/Workstation 5.0
- Hyper-V
Microsoft Hyper-V 2008
- Citrix
XenServer

Hardware

- Minimum: 2.0 GHz Pentium or equivalent

Disk space

- Minimum: 300 MB

Memory

- Minimum: 512 MB
