

WHAT'S NEW | PureMessage for UNIX

Introducing PureMessage for UNIX v6

More powerful and flexible than ever before

- ▶ Core Architecture improvements
- ▶ IPv6 support
- ▶ Performance improvements
- ▶ Faster and more robust forensics
- ▶ Support for automated installs
- ▶ Easy migration from v5 configurations
- ▶ SAN support

Core Architecture

IPv6 ready

We've added IPv6 support to all core components so you can secure your message traffic regardless of what kind of network it's traversing.

Performance improvements

We've updated several core components — such as Postfix, PostgreSQL and Apache — to provide added security, resolve outstanding issues and improve performance.

Optimizations to the end-user web quarantine provide you with an estimated 20% improvement in responsiveness.

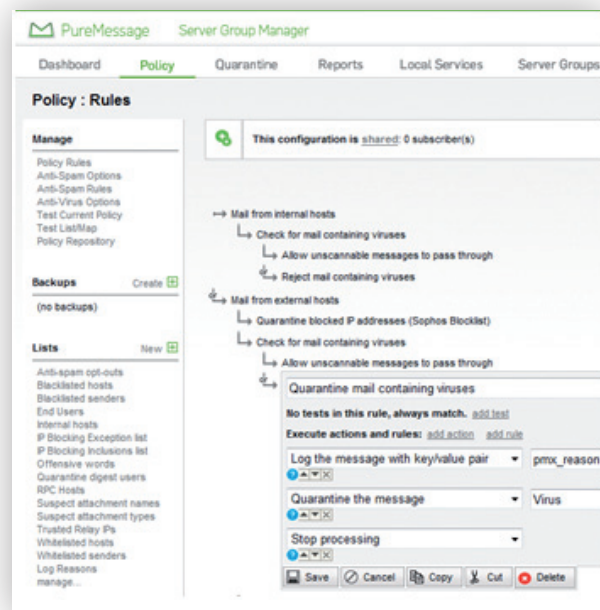

More robust forensics

Our revamped forensics system provides new features, added resiliency and improved reliability.

We improved search reliability and accuracy and you can now search logs by subject.

Indexing is now more robust, particularly when dealing with unparseable log entries or files.

The refreshed web management console provides a clean new look.

Deployment and Installation

Easy migration

To make your migration painless, we've maintained compatibility with v5 configurations including scripts, policy, configs and reports.

Use our step-by-step wizard to replicate configuration and data to ease migration.

Automated installs

We've streamlined the installation in multi-server environments.

We've made it easier and faster to add servers and do major upgrades through fresh installs — error free.

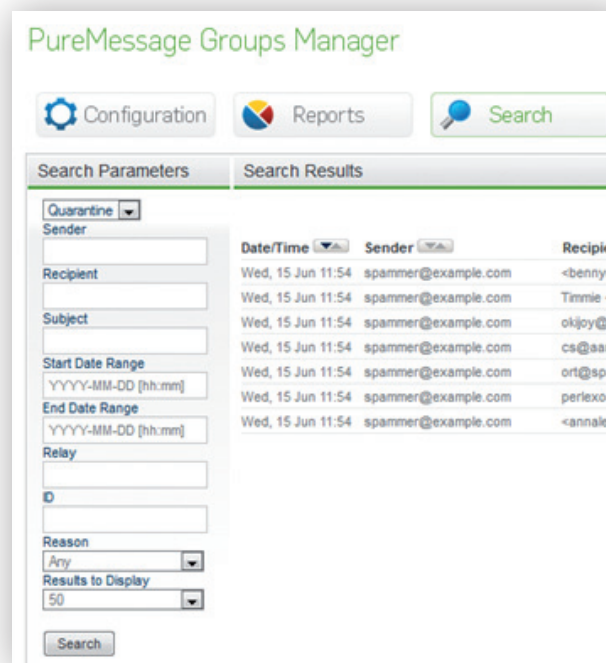

Automated installs are now supported using a configuration file generated from a single manual install.

SAN support

We now fully qualify and support SAN deployments providing you with new options for improved high availability and disaster recovery. Get back up and running in seconds.

With your system, config and data on a SAN we've made it easy for you to rapidly switch to a cold standby without the need for database replication.

Refreshed new group management console for your multi-tenant service.
