

## Web Appliance reporting

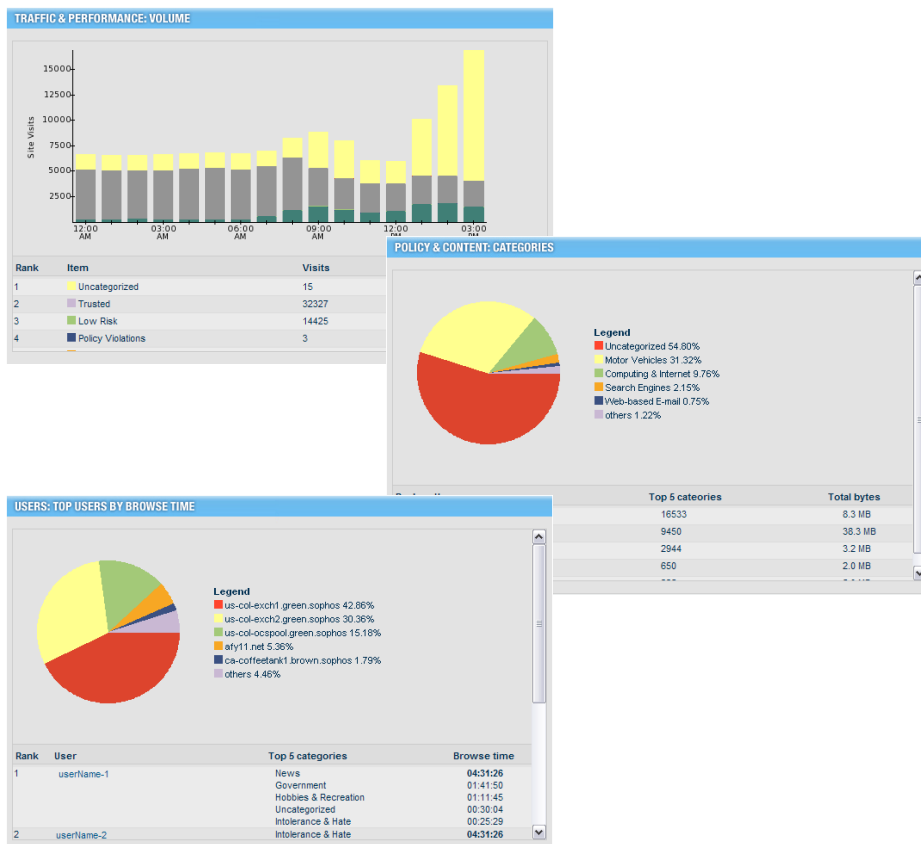

Sophos Web Appliances provide rich intelligent reporting that combines immediate real-time insight into web traffic on your network with drill-down forensic capabilities to analyze security threats, user productivity, and network performance. The Sophos Web Appliance makes reporting and sharing key metrics easy with intuitive web-based administration and automatic scheduled reporting for stakeholders.

### Instant insights from the real-time dashboard

The real-time dashboard is your launch pad into the Sophos Web Appliance's award-winning administrative console.

From the dashboard, gain immediate insights at a glance into:

- Today's activity and traffic, including current and peak measures for concurrent users online and page latency along with bandwidth consumption, download requests and page requests.
- Current web traffic throughput (kbps) and added latency (ms) in real-time.
- Recent virus updates applied from SophosLabs.
- A current count of blocked high-risk sites, malware, potentially unwanted applications and policy violations with instant one-click drill-down access to detailed reports.
- Real-time traffic pattern graphs illustrating throughput, malware activity and high risk site activity for the current 24-hour period.

## Key benefits

- » Get immediate transparency into activity on your network: See what sites users are visiting, search terms they are using, bandwidth they are consuming and much more.
- » Gain insight into the demands on your network and the threats you are facing through the real-time dashboard.
- » Satisfy insatiable stakeholders with automatic scheduled report packages distributed by email.
- » Reduce the administrative burden with simple, intuitive navigation, logically defined ad-hoc reports and sophisticated drill-down capabilities.
- » Identify important trends and make quick decisions with rich graphical reports.
- » Reduce the noise and clutter in your reports by easily excluding site categories or domains that are unimportant.
- » Perform deep dive investigations on-demand simply and easily with advanced forensics tools.
- » Leverage Sophos's pre-packaged search term lists for foul language, violence, and hacking.
- » Customize the reporting system to suit your needs with a wide variety of options, including the ability to define custom reporting groups and search term lists.
- » Share or perform further analysis on web activity data by exporting in a variety of common formats such as PDF or CSV.
- » Easily, securely integrate your Sophos Web Appliance reporting log data with your Syslog environment.

## Advanced reporting made easy

Analyzing the vast data related to web activity on your network including security threats, user productivity, legal liability, bandwidth consumption and network performance can be a daunting task. Based on research and customer input, Sophos has developed advanced reporting tools with easy and intuitive task based reports that work the way you want, right out of the box:

- Reports are organized into logical groups, intuitively named and can be run as needed in real time. Common default settings and thoughtful parameters make access to relevant important information quick and easy.
- Easily customize any report with a variety of granular but sensible reporting parameters that offer over 74 different views of your data, enabling you to focus on details most relevant to your investigation
- Reports provide sophisticated but intuitive drill-down capabilities with rich cross-linking to ensure the detailed information you need is only a click away.
- Wizard-based reporting options make common tasks like scheduling reports and defining search terms to monitor simple and straight-forward even for non-technical users.

## Set-and-forget automated scheduled reporting

Make your life easy while satisfying stake-holders demands for information with Sophos Web Appliance's rich and powerful automated scheduled reporting options:

- Distribute PDF report packages on network performance, security, policy compliance, content downloads or search activity to key stakeholders automatically by email.
- Setup automated reporting with Sophos's unique report scheduling wizard by selecting a reporting package to circulate, the desired schedule (daily, weekly, monthly or custom) and the recipient group or individuals.
- Define as many different automated scheduled reports as you need to keep your team and stakeholders well informed.

## Make user investigations easy with deep forensics capabilities

Sophos Web Appliances log all user internet activity and make it simple to undertake acceptable use, productivity or security violation investigations:

- Search for all activity by user name or IP address across a broad range of times and dates.
- Filter activity to determine if users have been attempting to visit blocked sites or bypass warnings—even focus in on a particular site or domain of interest.
- Leverage the pervasive drill-down capabilities in reports and the forensics tools to perform a deep-dive into specific instances of site or user activity.
- Export results to include in HR files or reports as needed.

## Standard reports

### Traffic and performance

- » Volume
- » Latency
- » Throughput

### Users (security)

- » Virus Downloaders
- » PUA Downloaders
- » High Risk Site Visitors
- » Policy Violators

### Users (productivity and liability)

- » Top Bandwidth Users
- » Top Users by Browse Time
- » Browse Time By User
- » Top Users By Category
- » Category Visits By User
- » Site Visits By User
- » Users By Search Queries

### Policy and content

- » Sites Visited
- » Categories Visited
- » File Downloads
- » Warned Sites
- » Blocked Sites
- » Suspect Machines

### Report customization

- » Period
- » Number of Top Users
- » Site Category
- » User
- » Reporting User Group
- » Sort Criteria

### Data viewing and export options

- » Web
- » CSV
- » PDF
- » Printable HTML
- » Syslog integration

### Report options

- » Reporting User Groups
- » Automated Email Report Scheduling
- » Report Exceptions (Domains and/or Categories)
- » Search Term Lists
