

# Sophos Anti-Virus

Sophos Anti-Virus for DOS/Windows 3.1x is virus detection and disinfection software for PCs running DOS and Windows 3.1x. It checks local hard disks, floppy disks and networks, Internet downloads and email attachments for the presence of viruses. It operates in scheduled and on-demand modes. Its unique architecture intelligently determines which files need to be virus checked, maximising user transparency and minimising performance overhead. Flexible configuration options mean that Sophos Anti-Virus can make the most efficient use of workstation and network resources.

## How it works

Sophos Anti-Virus for DOS/Windows 3.1x offers on-demand and scheduled scanning and ensures 100% virus detection.

**Infected files** can be deleted (reversible) or shredded (irreversible).

**Infected boot sectors** and **infected documents** can be disinfected.

Sophos Anti-Virus for DOS/Windows 3.1x can be installed, configured and updated without visiting desktops, and without requiring user intervention.

## Features

- Easily detects polymorphic viruses using Sophos's advanced Virus Description Language (VDL) and a built-in code emulator.
- Detects and disinfects macro viruses, boot sector viruses and PE executable viruses.
- Scans inside encoded and archive files.
- Provides automatic updating for networked PCs.
- Allows multiple scheduled jobs to be configured for automatic operation.
- Can be installed automatically on multiple workstations from a login script.
- Allows checking on demand.
- Is available in multiple language versions.
- Offers on-screen expert help as part of the CD.
- Provides Sophos Anti-Virus for PCs, Macintosh and servers, all as part of a single licence.
- Is constantly updated.

## Technical details

<b>Product name</b>	Sophos Anti-Virus for DOS/Windows 3.1x.
<b>Function</b>	Scanning individual drives for known viruses.
<b>Mode of operation</b>	Fully DOS and Windows 3.1x compliant 32-bit application with a graphical user interface, extensive on-line virus information database and comprehensive on-line help.
<b>Updates</b>	Continuous updates are available via the Sophos website for new viruses detected in the wild. In addition, full monthly updates are available for download. Sophos also sends full updates on CD to all customers at the beginning of each month.
<b>Virus alerts</b>	The user is alerted by an on-screen message and information is written into the Sophos Anti-Virus report files.
<b>Specification of items to be checked</b>	Memory, individual files with specific extensions, files not on exclusion list, and recursive searching of subdirectories.
<b>System requirements</b>	DOS 5.0 and /or Windows 3.1x.
<b>File systems supported</b>	FAT, FAT32.
