

What's new in Endpoint Security and Control 9.5

This upcoming release focuses on delivering even more features to protect you against threats.

Key new features

Live Anti-Virus

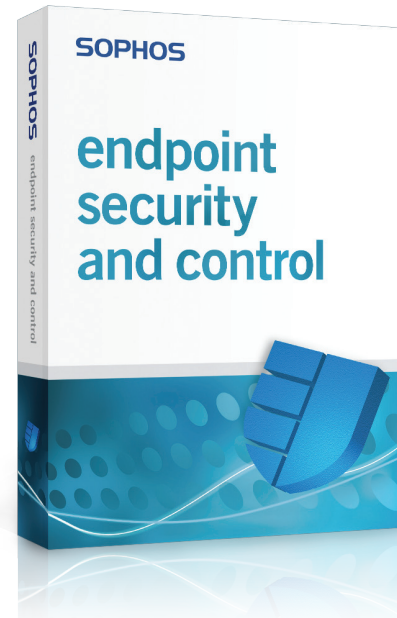

- » Improves proactive detection, reducing reliance on updating by stopping previously unseen threats faster
- » Instantly checks the reputation of suspicious files against an extensive in-the-cloud database of known good and bad reputation data
- » Shares threat reputation data between SophosLabs, products and customers, meaning you benefit from even greater threat protection

Live URL Filtering

- » Protects endpoints that are accessing the internet via home or public Wi-Fi networks and not going through a gateway web appliance
- » Blocks mobile/remote endpoints from accessing URLs classified by SophosLabs as hosting malicious software or malicious code
- » Live lookups to the SophosLabs malicious URL database protects against millions of compromised sites

Tamper protection

- » Prevents users from uninstalling key Sophos protection components on an endpoint, such as anti-virus, client firewall or updating
- » Policies can be applied to different groups of computers allowing you to set different passwords by group as required

Platform enhancements

- » Server support for both Windows 7 and Windows Server 2008 R2
- » Sophos Client Firewall support for 64-bit Windows computers
- » Full 32- and 64-bit server and agent support for Sophos NAC
- » Support for Microsoft Hyper-V 2008 and vSphere 4

For **Endpoint Security and Data Protection** customers:

SafeGuard Disk Encryption 5.50

- » Support for Windows Vista and Windows 7 (32- and 64-bit versions)
- » Local self-help for users to recover forgotten passwords
