

Email Security and Control for Managed Service Providers

Enabling MSPs to offer differentiated, high-margin managed email security services.

Business challenge

As a Managed Service Provider, you are finding that the ever-increasing quantity of new email-borne threats and the rapid acceleration in the speed at which they spreading are threatening the security of your customers' networks. You need an email security solution that ensures your customers are protected from security threats in a way that maximizes customer value and controls administrative costs.

Sophos solution

Sophos PureMessage® for UNIX provides a highly scalable, multiple domain, secure solution at the email gateway, uniquely integrating anti-virus, anti-spam and policy enforcement capabilities. With impressive accuracy rates, you are assured of high customer satisfaction and fewer help desk calls.

Award-winning technology

PureMessage for UNIX protects the enterprise network from email-borne viruses, Trojans, worms, spyware and phishing. By countering the rapid evolution of new spam techniques, PureMessage also keeps inboxes free of unsolicited bulk email and helps maintain network performance and employee productivity.

Benefits

PureMessage for UNIX provides industry-leading protection for customers:

- Powerful anti-virus protection detects, disinfects or quarantines viruses, spyware, phishing attacks, Trojans and worms in incoming and outgoing email.
- Powerful spam protection detects up to 98% of spam and protects against email scams, including phishing attacks.
- Reputation filtering eliminates up to 80% of spam at the connection level using the Sophos IP Block List, reducing scanning requirements and accelerating delivery of clean mail.
- Content security protects against confidential information leakage to meet organizations' specific email policies.
- Multi-language filtering protects global organizations from viruses and spam in multiple languages.
- Sophos Genotype® technology detects evolving spam campaigns and new virus variants, allowing MSPs to provide proactive protection to customers.

Additional benefits

- » Incorporates a flexible policy environment to support complex security or regulatory compliance requirements.
- » Enables you to provide a full-featured solution with customizable quarantine features for the quick retrieval of legitimate messages via end-user interfaces.
- » Provides end-user quarantine review, allow lists and block lists.
- » Allows you to grant varying levels of autonomy on policy rules, reporting, and quarantine searching to email administrators in different organizations or customers.
- » Provides you with a highly flexible and extensible solution that can adapt with evolving requirements.
- » Provides you with 24x7x365 support and Sophos can be contacted for one-to-one assistance at any time.
- » Updates automatically with the latest protection from SophosLabs, a global network of threat analysis centers.

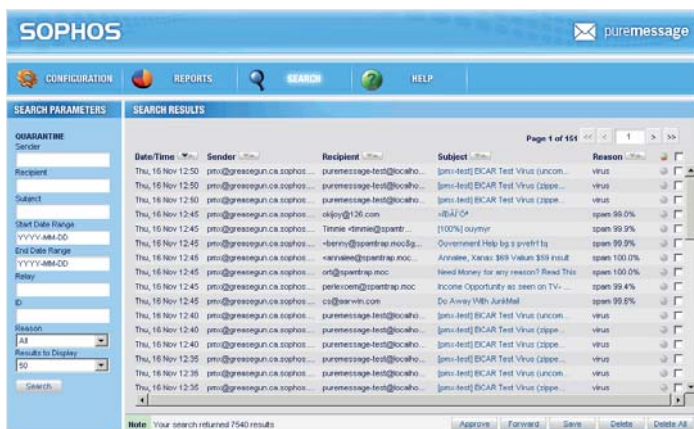

Email Security and Control for Managed Service Providers

Management

PureMessage for UNIX is designed to allow you to extend visibility and control over email to your customers. The ability to delegate and customize administrative privileges increases customer satisfaction, as well as reducing your workload.

Benefits

- Delegated administration extends administrative privileges to domains for better control and efficiency, and releases you from day-to-day administration tasks. As an MSP, you can allow your customers to perform a variety of tasks such as:
 - Enable or disable spam, virus and suspicious attachment checking for the domain
 - Manage domain-specific lists
 - Manage domain-specific message disclaimers
 - Run reports on the domain's email traffic
 - Search and manage the domain's quarantine
- Highly flexible and extensible policies give you the opportunity to create extra revenue by offering customized email policies to customers.
- Deployment flexibility ensures a strong fit with MSP environments due to multi-server management tools, support for a variety of platforms, and the ability to deploy in virtualized environments.
- Easy configuration and management enables you to provide customers with highly usable configuration and management of their email via PureMessage's delegated web interface.

Easy-to-use web interface
