

Next-Gen Firewall

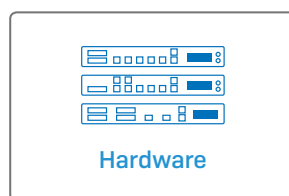

Award-winning network security as white-label solution

Sophos provides OEM partners with a choice of hardware, virtual or software next-generation firewalls that meet the security needs for small to medium businesses as well as large enterprise customers. These solutions deliver comprehensive security with excellent throughputs and come pre-packaged with industry-leading threat protection.

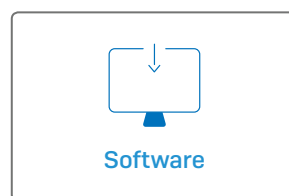

Key Benefits

- ▶ Purpose-built GUI with interactive control center
- ▶ New unified policy model enabling all business, user and network policies to be managed on a single screen
- ▶ User Threat Quotient for identifying risky users based on recent browsing behavior
- ▶ Patented Layer-8 Identity control
- ▶ Patent-pending SPX encryption for email security and built-in DLP
- ▶ Custom IPS, Web, App, and Traffic Shaping (QoS) settings per user or network policy on a single screen
- ▶ Central management
- ▶ API for 3rd party integration

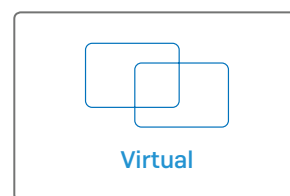

Sophos offers industry-leading customization, manageability, unrivaled features, committed OEM support and more to help partners differentiate in an increasingly competitive network security marketplace.

Purpose-built devices to provide the ultimate in performance.

Install the Sophos Firewall OS image on your own hardware.

Install on VMware, Citrix, Microsoft Hyper-V and KVM.

Advanced protection kept simple

Most firewall products make you set up and manage policies across multiple modules or screens. Not Sophos. We provide a powerful unified policy model that allows you to manage, view, filter, and sort all your user, application and network policies on a single screen.

More-in-one protection

You get all the next-gen firewall features you need plus features you can't get anywhere else - including full web application firewall, advanced threat protection, complete email anti-spam, encryption and DLP. No extra hardware. No extra cost. Simply choose what you want to deploy.

On-box reports included as standard

With hundreds of built-in reports you'll know exactly what's happening with your users and your network. You get detailed reports as standard, stored locally with no separate tools required.

How to Buy

Every appliance comes with our Base Firewall as standard which includes IPSec and SSL VPN and comprehensive Wireless Protection. You can extend protection with our total protection bundles or by adding protection modules individually.

All the protection you need to stop sophisticated attacks and advanced threats while providing secure network access to those you trust.

Set up, manage and secure wireless networks in just minutes with the UTM's built-in wireless controller that works with our full range of wireless access points.

Comprehensive protection from the latest web threats and powerful policy tools ensures your users are secure and productive online.

Full SMTP and POP message protection from spam, phishing and data loss with our unique all-in-one protection that combines policy-based email encryption with DLP and anti-spam.

Harden your web servers and business applications against hacking attempts while providing secure access to external users with reverse proxy authentication.

Seize recurring, additional revenue streams and greater flexibility with security subscription-based business model
