

Healthcheck

Keep your Sophos software well tuned

- ▶ Be sure your information security is keeping pace with change
- ▶ Be ready to handle employee turnover, reorganizations and fast growth
- ▶ Adapt to new technology infrastructure
- ▶ Take into account any policy and procedure changes
- ▶ Analyze and evaluate new threat sources
- ▶ Identify any gaps in meeting your security requirements
- ▶ Address new compliance requirements
- ▶ Get a read on your Sophos endpoint, encryption, gateway and network security

You implemented our software correctly and protected your information thoroughly. The business, the threats and the technology infrastructure changed. Is it time for a tuneup? The project-based Healthcheck service ensures your Sophos endpoint, encryption, gateway and network software is configured to meet your security needs today.

What you get

- We take into account all changes to your requirements and configuration since your software was deployed
- We analyze your current configuration, policies and procedures
- We match your current solution against best practices
- We identify any gaps in the fulfillment of your security requirements
- We cover all the recommendations needed to close requirement gaps, improve protection and reduce your costs

Adapt and adjust—with expert help

A well-intentioned effort to reconfigure security solutions can miss the mark or cost more than necessary. With Sophos, you get experts who have helped many organizations update their security measures and nailed it with the right changes. We help you scope the project and cover your endpoint, encryption, gateway and network security with precision.

What changed? We identify what is different in the business, technology and environment.

Determine gaps Change creates security openings, and we help catch them.

Fill the gaps We close any gaps that have emerged in security or compliance.

Handle new rules The standards only get tougher, and compliance is mandated.

Achieve higher returns Your Sophos investment can improve with time. Our work in Healthcheck engagements seeks to increase your ROI and make your security stronger than when you started with Sophos.

We look at every aspect of your information security

With Healthcheck, our first job is to build a complete picture of your security situation. That view includes your architecture, security posture and current threat exposure.

Identify project team members These are the people who know your security and infrastructure from the ground up.

Administer security questionnaire The questionnaire is based on our worldwide experience identifying security gaps.

Interviews We conduct onsite interviews and/or workshop with your project team members.

Are your current security policies up to date and enforceable? Does your threat management process stand up to today's latest blended threats? Has your infrastructure reached its limits for security purposes? We answer these questions by taking a series of steps.

Best practices analysis We complete a rigorous comparison of your current security policies to industry best practices for safeguarding data and networks.

Assess policy enforcement We determine how consistently and completely security policies are enforced.

Pinpointing gaps Once defined, we can address the vulnerabilities.

We identify the actions you need to take to close the gaps

Healthcheck delivers recommendations that are precisely geared to your current security needs. We outline the actions required at the architecture, configuration and policy levels.

Architectural changes In some organizations, growth or security threats make it advisable to modify the security infrastructure and architecture.

Configuration changes Where our consultants identify configuration changes that are advisable, we can also carry out those changes.

Optimization plan We deliver a complete plan to optimize your security solution. This plan covers policy changes, new policy enforcement methods if needed, and upgrades to your threat management procedures. We also recommend a specific deployment model and strategy for your company.

PROJECT OVERSIGHT

Proven ITIL-based methodology

We apply a comprehensive, ITIL-based methodology and proven tools to every engagement. You receive not only the best expertise, but the best practices to help you deploy and use your Sophos software.

Get more out of your software— from planning to operation

Sophos Professional Services support the lifecycle of Sophos software—from planning and implementation to ongoing operation of the system.

Healthcheck is a structured program from Sophos Professional Services that helps you optimize an existing endpoint, encryption, gateway or network solution based on our software. With Healthcheck, our consultants apply best practices to help you manage your Sophos software through inevitable changes.
