Sophos Phish Threat

Reduce your largest attack surface

Your end users are the most likely target for malware attacks. Keep your information safe with effective security awareness testing and training. Automate defense education for your users with routine campaigns, training, follow-up, and reporting.

Highlights

- Managed simulated phishing campaigns
- On-demand phishing assessments
- Personalized training for end users caught in a simulated attack
- Automated reporting on phishing and training results

Information security is only as secure as your weakest link

Attackers relentlessly target end users with spear-phishing, spam, and socially-engineered attacks. More than 90% of ransomware attacks are delivered via these types of email messages. Sophos Phish Threat emulates basic and advanced phishing attacks to help you identify areas of weakness in your organization’s security posture.

Easy campaign generation

Simulate phishing, credential harvesting, or malware attacks in a few clicks. You’ll be up and running in minutes with constantly updated and socially relevant templates. Campaigns can be distributed broadly or targeted at specific roles in your organization like HR, Finance, and other departments.

Effective training modules

Training modules are designed to educate about specific threats such as suspicious emails, credential harvesting, password strength, and regulatory compliance. Your end users will find them informative and engaging, while you’ll enjoy peace of mind when it comes to future real-world attacks.

Comprehensive reporting

The Phish Threat dashboard reports on results by company, department, and individual users, providing your entire IT organization with insight into individual performance and company-wide security posture alike.
