Sophos Cloud Optix, the Sophos Cloud Security Posture Management solution, proactively reduces business risk from unsanctioned activity, vulnerabilities, and misconfigurations across Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform public cloud environments.

**Complete Cloud Security Posture Management**
Sophos Cloud Optix provides a complete picture of cloud resources across multi-cloud environments. Monitoring costs, detecting insecure configurations and deployments, access anomalies, over-privileged IAM roles, and compliance failures from development to the ongoing security of live services.

**Identify and Respond to Threats Faster**
Focus on and fix your most critical security vulnerabilities before they are identified and exploited in cyberattacks. By identifying and risk-profiling security, compliance, and cloud spend risks, Cloud Optix ensures teams respond faster, providing contextual alerts that group affected resources with detailed remediation steps.

**Security at The Pace of DevOps**
Block vulnerabilities in container images and infrastructure-as-code templates pre-deployment with Cloud Optix. Seamlessly integrate Sophos security and compliance checks at any stage of development to maintain the pace of DevOps without introducing threats into production environments.

**Manage Permissions Before They’re Exploited**
Cloud Optix analyzes complex, interwoven Identity and Access Management (IAM) roles to visualize relationships, making it simpler to manage access privileges for user, group and cloud service roles. Guiding you on where to make IAM policy updates with the cloud provider before over-privileged IAM access is exploited.

**Reduce Compliance Cost and Complexity**
Sophos Cloud Optix reduces the cost and complexity of compliance with policies that automatically map to your environments, producing audit-ready reports without diverting resources from other projects. Compliance and security best practice policies include: GDPR, HIPAA, PCI DSS, SOC2, ISO27001, FFIEC, EBU R 143, FedRAMP, CIS Benchmark Level 1 and Level 2 for AWS, Azure, Google Cloud and Kubernetes.
Optimize Cloud Costs and Improve Security
Track cloud services side-by-side for improved visibility, receive recommendations to optimize AWS and Azure spend, and identify unusual activity indicative of abuse or account compromise.

Integrate Seamlessly
Integrate with cloud provider native services to unlock even greater value. Cloud Optix automated analysis and risk prioritization of security alerts from cloud provider services including AWS CloudTrail, Amazon GuardDuty, AWS Security Hub, Azure Sentinel and many more ensures security teams responds faster and more efficiently to events. While access to Cloud Optix features programmatically via a REST API and integration with third-party services such as SIEM and DevOps tools help to streamline security operations and improve collaboration. The full range of integrations can be found here soph.so/cloud-integrations.

Extend your data sources with XDR
Detect AWS, Azure and Google Cloud environment API, CLI, and management console activities with Cloud Optix. Then investigate findings with additional context from Sophos

Intercept X for Server workload protection agents running on EC2 Instances and virtual machine workloads in the cloud. Requires Cloud Optix Advanced and Intercept X Advanced for Server with XDR.

Simplify Management and Deployment
Cloud Optix agentless, SaaS-based service works perfectly with your existing business tools.

Connection to cloud accounts in AWS, Azure, or Google Cloud is a simple process due to the provided instructions and scripts which create read-only access via the native cloud APIs.

The Sophos Cloud Security Platform
Cloud Optix is part of Sophos Central, a single intuitive hybrid cloud security management platform to enable your digital transformation. Our award-winning solutions are easy to deploy, manage, and are highly effective at stopping todays cyberattacks. Enabling organizations to secure cloud access, applications, and infrastructure with ease.

The World’s Most Trusted Unified Cloud Security Platform
