Sophos Cloud Optix

Identify vulnerabilities, ensure compliance, and respond to threats faster. Cloud Optix provides a complete picture of cloud resources and configurations across AWS, Azure, Google Cloud, Kubernetes, and infrastructure-as-code environments. Enabling security teams to focus on and fix critical security vulnerabilities before they are identified and exploited in cyberattacks.

**Highlights**
- Monitor AWS, Azure, Google Cloud, and Kubernetes
- Multi-cloud asset and network traffic visibility
- Risk-based prioritization of security issues with guided remediation
- Optimize spend and identify unusual activity
- Identify overprivileged user and role-based access
- Block vulnerabilities pre-deployment with DevOps integrations

**Complete Cloud Security Posture Management**
Sophos Cloud Optix provides a complete picture of cloud resources across multi-cloud environments. Monitoring costs, detecting insecure configurations and deployments, access anomalies, over-privileged IAM roles, and compliance failures from development to the ongoing security of live services.

**Identify and Respond to Threats Faster**
Focus on and fix your most critical security vulnerabilities before they are identified and exploited in cyberattacks. By identifying and risk-profiling security, compliance, and cloud spend risks, Cloud Optix ensures teams respond faster, providing contextual alerts that group affected resources with detailed remediation steps.

**Security at The Pace of DevOps**
Block vulnerabilities in container images and infrastructure-as-code templates pre-deployment with Cloud Optix. Seamlessly integrate Sophos security and compliance checks at any stage of development to maintain the pace of DevOps without introducing threats into production environments.

**Manage Permissions Before They’re Exploited**
Cloud Optix analyzes complex, interwoven Identity and Access Management (IAM) roles to visualize relationships, making it simpler to manage access privileges for user, group and cloud service roles. Guiding you on where to make IAM policy updates with the cloud provider before over-privileged IAM access is exploited.

**Reduce Compliance Cost and Complexity**
Sophos Cloud Optix reduces the cost and complexity of compliance with policies that automatically map to your environments, producing audit-ready reports without diverting resources from other projects. Compliance and security best practice policies include: GDPR, HIPAA, PCI DSS, SOC2, ISO27001, FFIEC, EBU R 143, FedRAMP, CIS Benchmark Level 1 and Level 2 for AWS, Azure, Google Cloud and Kubernetes.
Optimize Cloud Costs and Improve Security
Track cloud services side-by-side for improved visibility, receive recommendations to optimize AWS and Azure spend, and identify unusual activity indicative of abuse or account compromise.

Integrate Seamlessly
Access Cloud Optix features programmatically via a REST API and integrate seamlessly with AWS services including Amazon GuardDuty and AWS CloudTrail, Azure Sentinel and Azure Advisor. As well as with third-party SIEM, Ticketing, and DevOps tools to streamline security operations. The full range of integrations can be found here https://soph.so/cloud-integrations.

Simplify Management and Deployment
Cloud Optix agentless, SaaS-based service works perfectly with your existing business tools.
Connection to cloud accounts in AWS, Azure, or Google Cloud is a simple process due to the provided instructions and scripts which create read-only access via the native cloud APIs.

The Sophos Cloud Security Platform
Cloud Optix is part of Sophos Central, a single intuitive hybrid cloud security management platform to enable your digital transformation. Our award-winning solutions are easy to deploy, manage, and are highly effective at stopping today's cyberattacks. Enabling organizations to secure cloud access, applications, and infrastructure with ease.

The World's Most Trusted Unified Cloud Security Platform

- **CONNECT SECURELY**
- **PROTECT WORKLOADS**
- **SECURE THE NETWORK**
- **INTEGRATE WITH DEVOPS**

Protect credentials and securely access services
- Secure Access
- Endpoint Security
- Phishing Protection

Detect, query and secure hybrid cloud workloads
- Workload Protection and EDR
- Cloud Security Posture Management
- Overprivileged IAM Role Detection

Cloud network security and automated threat response
- Firewall, WAF and VPN
- Application Visibility
- Security Automation

Embed security into development processes
- CI/CD Integration
- Container Image Scanning
- Threat Intelligence APIs

24/7 Threat Hunting, Detection, and Response
