Sophos Cloud Security

Accelerate your business and ensure security enables cloud transformation with Sophos. Secure cloud workloads, data, apps, and access from the latest advanced threats and vulnerabilities with the world's most trusted cloud cybersecurity platform, Sophos Central.

24/7 Cloud Threat Detection and Response

Increase your security team's efficiency with a single management view connecting Sophos cloud security posture management, firewall and workload protection across hybrid and public cloud environment. Backed by an elite team of security experts to enable 24/7 threat protection, monitoring and response across your environment.

Hybrid Cloud Security Trusted by Millions

Sophos is trusted by millions of users to provide powerful and effective cybersecurity solutions that are specifically designed to be accessible and manageable for any organization. Available in a single, unified management console, Sophos Central, Sophos threat protection, monitoring, and response solutions provide protection of on-premises and cloud environments from the latest advanced threats and vulnerabilities.

Cloud Native Protection

Accelerate your business and protect cloud investments with Sophos cloud native protection, covering Amazon Web Services, Microsoft Azure, Google Cloud Platform, Oracle Cloud Infrastructure, Kubernetes clusters, container registries, and Infrastructure-as-Code environments from the latest threats and vulnerabilities – while optimizing cloud resource spend.

The Weight of Cloud Security Off Your Shoulders

Deploy and managed Sophos protection with an in-house IT security team, or connect with experienced Sophos Cloud Security Provider partners around the world. Our flexible approach means optimizing security and compliance posture, keeping data secure and private while blocking advanced threats are goals you can easily achieve.

"We recognize that bad guys will work 24/7 and will attack at the most inconvenient times. To support us, Sophos is there 24/7 so my team doesn't need to be,"

says Celayix Director of Software Engineering Dinesh Adithan.

Highlights

- Secure cloud workloads, data, apps, and access
- Automate threat protection of public cloud environments
- Proactively prevent misconfigurations and security vulnerabilities
- 24/7 managed threat response to continuously monitor, analyze, and triage security events
- Available in AWS and Azure Marketplace
- Utilize budgeted security spend to reach any cloud provider contracted consumption commitments

SOPHOS

Move Fast and Stay Secure

Respond faster to security events related to your public cloud environments. With Sophos, you get single cybersecurity ecosystem combining SaaS email security, cloud security posture management and compliance, firewall, cloud workload and endpoint protection. Sophos Managed Threat Response service continuously monitors cloud environments, analyzes, and triages security events.

Cloud Edge Firewall

Sophos High Availability cloud edge firewalls protect environments from known and emerging network threats, maintain web-application availability with WAF, and extend your secure network to remote workers with flexible SD-WAN, ZTNA, and VPN connectivity options to ensure organizations can connect anyone, anywhere.

SaaS Email Security

Protect sensitive information – and your people – from unwanted and malicious email threats, including phishing, business email compromise attacks, and ransomware with Sophos Email for Microsoft Office 365, Google Gmail, and any SaaS email services where the organization manages the domain.

Cloud Security Posture Management

Sophos Cloud Optix helps proactively reduce business risk from unsanctioned activity, vulnerabilities, and misconfigurations. This agentless service continually monitors public cloud infrastructure to provide organizations with visibility of deployed resources and IAM roles to detect when accounts and configurations do not align to security and compliance best practices, including CIS Foundations Benchmarks, HIPAA, ISO 27001, PCI DSS, and SOC2 standards.

Cloud Workload Protection

Wrap Sophos protection around host instances, serverless environments, and container images to protect cloud workloads, applications and data. Stop ransomware and advanced threats with award-winning protection for cloud server host instances with Sophos Intercept X for Server with XDR for cloud workloads, scan container images for security vulnerabilities with Sophos Cloud Optix, and build secure web applications in serverless environments with SophosLabs Intelix APIs providing automated threat lookups and anti-malware scans.

Backed by a Dedicated Team of Security Experts

Automatically preventing the latest advanced threats is step one. The Sophos Managed Threat Response service team receives telemetry from these Sophos products to enable 24/7 threat protection, monitoring, and response across cloud environments. This experienced team detect the weaker signals – suspicious behaviors and events – and prevent them from compromising your data and systems.

Modernize Cybersecurity Procurement

Sophos cloud security is available via AWS Marketplace and Azure Marketplace to help customers improve procurement processes and match the speed of cloud while maintaining governance, while at the same time counting towards any cloud provider consumption commitments already in place.
