

# Patch Assessment in Endpoint

## Take the guesswork and uncertainty out of patching

Patching can prevent as much as 90% of vulnerabilities. Yet, many computers remain at risk because patching is difficult. IT Managers don't know which patches are needed, and they're not confident their computers are patched.

With our Patch Assessment in Endpoint we prioritize the most critical patches for you by tying them to the threats they prevent. Be confident in your security knowing that our patch assessment identifies, prioritizes and scans for critical threat-related patches. And it's integrated into our Endpoint Protection 10—delivered in one deployment and managed from a single console.

- ▶ Get started with patch assessment—easily and affordably
- ▶ One simple scan finds unpatched computers vulnerable to threats
- ▶ Scans for Windows and other common application patches
- ▶ We prioritize patches based on threats and likelihood to be exploited
- ▶ We make it easy to see computers missing critical patches. Sort by patch vendor, threat, priority and more
- ▶ It's all integrated into our Endpoint 10. No separate deployment or console to manage

## Reduce your risk of infection

With one simple scan our Patch Assessment in Endpoint finds unpatched computers, helping you fix vulnerabilities and keep your data and network safe.

**Scan for Windows and other application patches** We scan for patches for widely-used products from Adobe, Apple, Citrix, Microsoft, Skype and more.

**We prioritize patches by tying them to threats** We prioritize patches by tying them to threats. SophosLabs rates patches—critical, high, medium and low—based on our security intelligence. We tell you which patches really matter so you can maximize protection with minimum effort.

**Know your patch status with certainty** Our advanced scanning on the endpoint gives you confidence that your machines are patched. And, our detailed patching report is just what you need to prove compliance.

## No added deployment

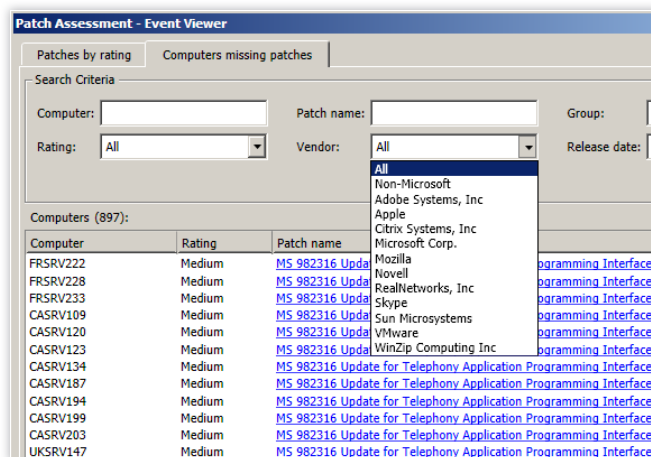

Best of all—it's all integrated. No separate deployment or console to manage. Sophos Patch Assessment in Endpoint is managed from our Endpoint Console. You can create patch assessment policies, view and manage reports all in one place. Simple!

## Try it now for free
