

# WHAT IS UTM?

## UNIFIED THREAT MANAGEMENT

### UTM and NGFW: What's the Difference?

Analysts define next-generation firewalls (NGFWs) as firewalls enhanced with intrusion prevention and application intelligence, and UTM systems as including those features plus additional technologies. In this view, UTM systems include NGFWs as components. However, many individuals use the terms interchangeably.

## UTM

A single modular appliance that includes multiple critical security technologies that are fully integrated, managed from a single console and provided by a single vendor.

## WHY DO YOU NEED PROTECTION? AND WHAT CAN WE OFFER YOU?

### Endpoint Protection

✓ Provides desktops, laptops, and servers with antivirus, device control and web security

### Email Protection

✓ Stops spam and viruses while keeping sensitive data safe with DLP and policy-based encryption

### Wireless Protection

✓ Centrally manage Wi-Fi access points and set up hotspots and guest access in minutes

### Web Protection

✓ Protect users from web threats, control online productivity and manage your web application bandwidth

### Webserver Protection

✓ Reverse proxy protects servers from exploits while providing authentication for external users

### Network Protection

✓ Configurable intrusion prevention with flexible VPN options for site-to-site and remote access

## 5 REASONS TO CHOOSE SOPHOS UTM

- ✓ Easy to install and use
- ✓ Built-in reporting on all models
- ✓ Secure Wi-Fi included
- ✓ Free central management
- ✓ Leader in Gartner Magic Quadrant for UTM
