

Sophos Secure Surfing Service (S4)

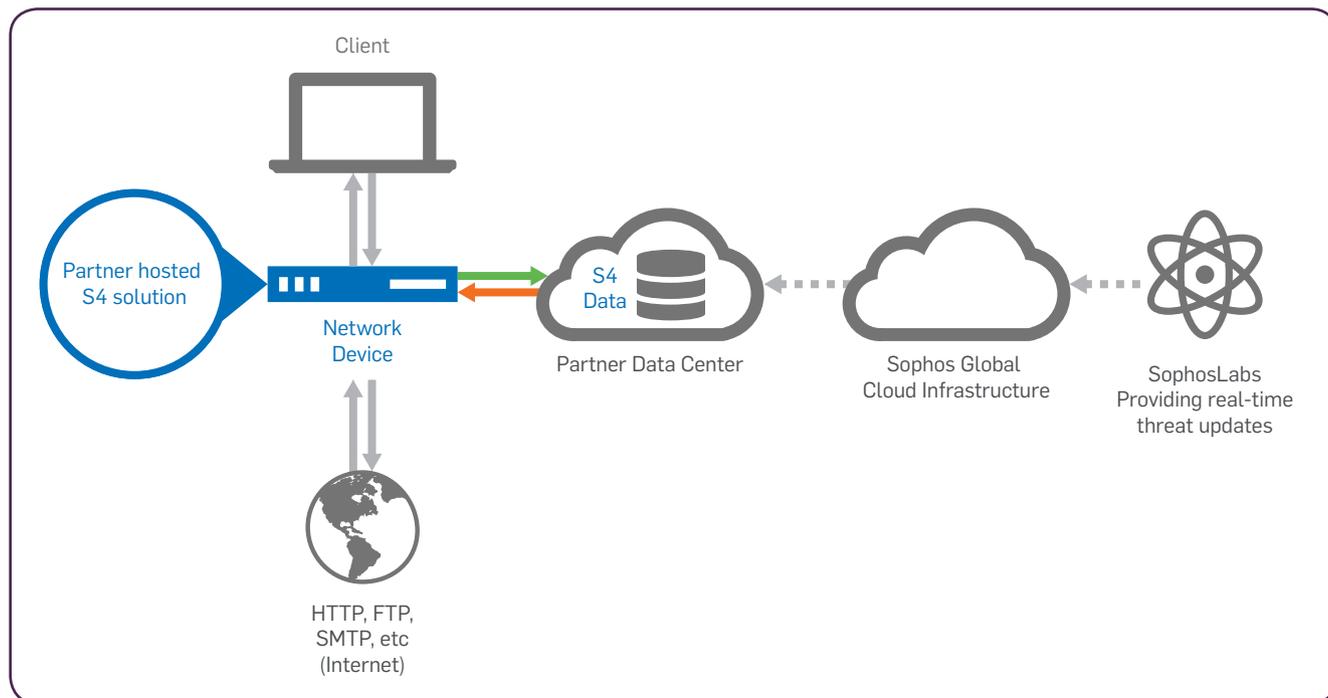

Adding an extra layer of protection to your solution

Sophos Secure Surfing Service (S4) is a high-performance solution that enables software and hardware vendors, ISPs and ASPs to easily extend their applications and product offerings. It eases partner identification of malware, spam and phishing sites.

How does it work?

SophosLabs—our global network of threat analysis centers—provides around-the-clock protection against known and emerging threats.

- ▶ Hundreds of thousands of known malicious URLs are stored locally in the database and thousands of URLs are added daily
- ▶ SophosLabs publishes updates with data additions and removals four times a day to ensure best protection
- ▶ S4 can be used on its own or in combination with other data sources to protect against web threats

S4 provides full protection against known malware, spam and phishing sites.

Easy to implement

- Detailed integration documentation describes how to download data from SophosLabs and query locally stored data

Secure

- Partners can access S4 data via a secure connection

Flexibility

- Run incremental URL updates on demand—on average, more than 80,000 web categorizations occur
- Pull down the entire master list or delta updates

High availability

- Rely on the Sophos global network for around the clock service and support

Consistent Performance

- S4 data is maintained and available 24/7 through SophosLabs

Typical deployment scenario

- Cloud-based service infrastructures
- Appliances with storage capabilities

Platforms supported

- S4 is platform independent

In-house expertise 24/7

- Dedicated technical account managers to help you integrate our technology
- Specialized OEM support delivered by engineers that speak your language
- OEM support available 24/7/365 by email or telephone to ensure customer satisfaction
