

# Sophos Intercept X for Mobile

## Mobile Threat Defense (MTD) for Android, iOS and Chrome OS devices

Intercept X for Mobile protects users, their devices, and corporate data from known and never-before-seen mobile threats by leveraging our market leading Intercept X deep learning engine. It is all managed seamlessly through Sophos Central, alongside the entire Sophos portfolio of next-generation cybersecurity solutions.

### Highlights

- ▶ Protection for Android, iOS, and Chrome OS devices
- ▶ Deploy using Sophos Mobile or alternate UEM products
- ▶ Leverages Intercept X deep learning on Android
- ▶ Comprehensive Man-in-the-Middle (MitM) threat detection
- ▶ Award-winning mobile security for Android
- ▶ Microsoft Intune conditional access
- ▶ Available from the Apple App Store and Google Play Store

### Device security

Sophos Intercept X for Mobile continuously monitors device health and notifies you if a device is compromised so you can take remediating action or automatically revoke access to corporate resources. Device security advisors detect jailbreaking or rooting and can inform the user and admin of necessary operating system updates.

### Network security

Establish a first line of defense at the mobile network level on Android and iOS. Network connections are examined in real time to check for suspicious characteristics that may identify an attack. This helps mitigate the risk of Man-in-the-Middle (MitM) attacks. Web filtering and URL checking stops access to known bad sites on mobile devices, while SMS phishing detection spots malicious URLs.

### Application security

Sophos Intercept X for Mobile detects malicious and potentially unwanted applications installed on Android devices using Intercept X deep learning technology alongside intelligence from SophosLabs global research team. Users and admins are notified if the threat status of a device changes. Integration with Microsoft Intune allows administrators to build conditional access policies, restricting access to applications and data when a threat is detected.

### Centralized deployment, configuration, and reporting

Sophos Intercept X for Mobile can be centrally configured from Sophos Central, which hosts our Unified Endpoint Management (UEM) platform. Deployment can occur via existing app stores with user enrolment, or the app can be pushed using existing UEM's such as Sophos Mobile or third-party Enterprise Mobility Management (EMM) tools.

### Conditional access with Synchronized Security

Synchronized Security enables your defenses to work together as a system to be more coordinated than the attackers. Threat status information can be shared with Sophos Wireless access points to ensure all threats on devices are fully remediated before access to sensitive networks is granted.

## Features
