

Sophos Threat Protection, Monitoring, and Response for AWS

Accelerate your business, and ensure security is the enabler for cloud transformation with a single cybersecurity package fusing automated protection and 24/7 managed threat response services for AWS.

Sophos Cloud Security

Move Fast and Stay Secure

Optimizing security and compliance posture, knowing which AWS service alerts to prioritize, keeping data secure and private, and blocking advanced threats are high priorities for all organizations, but these goals can be hard to achieve without specialist AWS platform skills.

Sophos is trusted by millions to provide powerful and effective cybersecurity solutions that are specifically designed to be accessible and manageable for any organization. Available in a single cybersecurity package managed from a central console, Sophos provides protection of data, and AWS environments from the latest advanced threats and vulnerabilities - helping organizations move fast and stay secure in the public cloud.

24/7 Protection and Monitoring of AWS Resources

As an AWS Level 1 Managed Security Service Provider and Advanced Technology Partner, Sophos have worked with AWS to develop a single, comprehensive cybersecurity package that combines endpoint, cloud workload, and network protection, vulnerability scanning, inventory visibility, and compliance tracking — capabilities that are facilitated, improved, and accelerated by artificial intelligence and machine learning.

Deployment Management

Our flexible approach means organizations control how the Sophos security package for AWS is deployed and managed across cloud environments.

- ▶ Deploy and manage Sophos protection with an in-house IT security team.
- ▶ Allow Sophos to connect you with experienced Sophos Managed Security Partners.
- ▶ Sophos Professional Services Team can help with initial deployment and conduct periodic security health checks[†].

Highlights

- ▶ AWS Level 1 Managed Security Service Provider and Advanced Technology Partner
- ▶ Automate threat protection of AWS environments
- ▶ Proactively prevent misconfigurations and security vulnerabilities
- ▶ Unlock greater value from AWS CloudTrail and Amazon GuardDuty services
- ▶ Combined cybersecurity package at a fix price
- ▶ Available on AWS Marketplace
- ▶ Utilize budgeted security spend to reach any AWS contracted consumption commitments

Sophos Threat Protection, Monitoring, and Response Package for AWS

Respond faster to security events related to your AWS environment with a single package combining posture management and compliance, firewall, cloud workload and endpoint protection; Amazon GuardDuty and AWS CloudTrail findings*; and the Sophos Managed Threat Response service to continuously monitor AWS environments, analyze and triage security events.

Posture Management and Compliance

Sophos Cloud Optix helps proactively reduce business risk from unsanctioned activity, vulnerabilities, and misconfigurations. Utilizing AWS CloudTrail and Amazon GuardDuty services Cloud Optix continually monitors public cloud infrastructure. This provides organizations with visibility of deployed resources and IAM roles to detect when AWS accounts and configurations do not align to security and compliance best practices including CIS Foundations 1.2, HIPAA, ISO 27001, PCI DSS, and SOC2 standards.

Network and Application Security

Sophos High Availability Firewalls protect environments from known and emerging network threats and maintain web-application availability. Save time deploying multiple network security products with an all-in-one firewall solution including IPS, ATP, URL filtering, and bidirectional antivirus for WAF to protect web-facing applications. Combine Sophos protection with the AWS Shield service to detect malicious traffic in real-time and reduce the attack surface in-line with AWS best practices.

Cloud Workload and Endpoint Protection

Sophos Intercept X with EDR provides automated advanced threat protection for endpoints, Amazon Workspaces, and cloud server instances. Keep users, applications, and data safe from the latest cybersecurity threats such as exploits and ransomware, while utilizing EDR to ask and answer IT operations and threat hunting questions and take action to fix any issues.

Backed by a Dedicated Team of Security Experts

Automatically preventing the latest advanced threats is step one. The Sophos Managed Threat Response service team receive telemetry from these Sophos products to enable 24/7 threat protection, monitoring and response across the AWS environment. This experienced team detect the weaker signals - suspicious behaviors and events - and prevent them from compromising your data and systems.

Modernize Cybersecurity Procurement with AWS Marketplace

Sophos Threat Protection, Monitoring, and Response package is available via AWS Marketplace to help customers improve procurement processes to match the speed of cloud while maintaining governance, and at the same time counting towards any AWS contracted consumption commitments already in place.

* Sophos package requires activation of AWS CloudTrail and Amazon GuardDuty services, which must be purchased separately
† Professional Service health checks are subject to regional availability. Please contact Sophos for more information.
