Product Highlights

"In-The-Cloud" Gateway

Delivered as a hosted service, RADAR is easy to deploy and operates seamlessly as a gateway to your existing IT network.

Comprehensive Archive

All inbound and outbound email and attachments are indexed, encrypted, and stored in real time for rapid access.

eDiscovery Tools

With powerful email discovery tools, including our exclusive DeepLink™ technology, users can instantly search the archive for any email or attachment, with very fast results.

Email Recovery

Customized email "packaging" allows users to recover their search results from the active archive back to their inbox.

Email Continuity

An integrated webmail client enables users to access the RADAR LITE archive 24x7 from any location to ensure continued access to email during power failures or in-house server outages.

Overview

For many companies, email is mission-critical. As the primary communications tool, server crashes can paralyze a business.

Reflexion's email continuity services allow end users to access their email and continue with business operations during an outage. As a major piece of a company's disaster recovery plan, our continuity services allow customers to send and receive email using any active Internet connection, including mobile connections.

RADAR LITE email continuity is comprised of a 60-day rolling archive that operates in conjunction with Reflexion Total Control (RTC).

Email Continuity

Email continuity provides for send and receive capability and continuous on-demand access to email from any location. Email is stored for 60 days regardless of the status of the customer's mail server.

Email Recovery

If a customer mistakenly deletes an email message they need, they're able to retrieve past messages and attachments that have been sent or received within the past 60 days.

Using RADAR's web interface, users can instantly recover any email or attachment from the active archive into their desktop inbox without assistance from IT.

Powerful Search

Reflexion's proprietary DeepLink™ discovery engine enables users to easily locate related emails and attachments from their mailbox archives. Authorized users are permitted to search across the enterprise.

Other Benefits

In addition to complete mobility and 24/7 email accessibility, RADAR LITE enables users to access the past 60 days of email and attachments within an active archive. Employees are not constrained by local configuration requirements or network access availability. Sending and receiving email happens securely via an encrypted SSL Internet connection, and there's full integration into Microsoft's Outlook email client.
